Executive summary

The Project – hereby meaning the Designated Project (Items O.6 and O.7 Part I, Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO)), comprising the "Kai Tak Sports Park" (KTSP) project and the Hotel and Office (H/O) Development of NKIL 6607 adjoining the KTSP – is located in the Kai Tak Development (KTD) area in Kowloon.

An EIA Report for the Project (Register No. AEIAR-204/2017) was approved by the Environmental Protection Department (EPD) on 6 January 2017. The current Environmental Permit (EP) for the Project, namely No. EP-544/2017, was issued on 8 September 2017. These documents are available through the EIA Ordinance Register. The Project construction works commenced on 8 April 2019.

In February 2019, Mott MacDonald Hong Kong Limited was appointed by the Home Affairs Bureau (HAB), as the Environmental Team (ET) to implement the Environmental Monitoring & Audit (EM&A) programme for the construction phase and first year of operation of the Project in accordance with the approved EM&A Manual.

In July 2022, Home Affairs Bureau (HAB) has been reorganized as Culture, Sports and Tourism Bureau (CSTB).

This is the 52nd Monthly EM&A Report for the construction phase of the Project which summaries findings of the EM&A programme during the reporting period from 1 to 31 July 2023.

Key Construction Works in the Reporting Period

A summary of construction activities undertaken during the reporting period is presented below:

KTSP

- Mobilization and lifting;
- Concreting;
- Excavation; and
- Main Stadium pre-cast material delivery.

H/O Development

- Excavation; and
- Concreting.

Environmental Monitoring and Audit Progress

The monthly EM&A programme was undertaken by ET in accordance with the approved EM&A Manual. A summary of the monitoring activities during the reporting period is presented below:

Activity	Monitoring Locations	Date
Air Quality Monitoring (1-hour TSP)	AMS1-T, AMS2, AMS4	3,7, 13, 19, 25, 31 Jul 2023
Noise Monitoring (L _{eq (30 min)})	NMS1-T, NMS2, NMS4	3, 13, 19, 25, 31 Jul 2023
Weekly environmental site inspections	-	5, 12, 19, 25 Jul 2023
Landscape and visual site inspections	-	5, 19 Jul 2023

*Note:

During the reporting period, monitoring station, Hong Kong Society for the Blind Workshop (AMS1 and NMS1), was no longer open for impact monitoring from 1 September 2022, due to relocation of the Hong Kong Society for the Blind Workshop.

Agriculture, Fisheries and Conservation Department Kowloon Animal Management Centre (AMS1-T and NMS1-T) were proposed to conduct dust and noise impact monitoring during the reporting period. Details of temporary alternative monitoring locations are presented in Temporary Alternative Proposal for Monitoring Station as proposed by ET and agreed by IEC dated 6 January 2021. The details of temporary monitoring station are described in Section 2 and Section 3 respectively.

Breaches of Action and Limit Levels

Air Quality

There was no breach of Action or Limit Levels for air quality (1-hr TSP) during the reporting month.

Noise

There was no breach of Action or Limit Levels for noise levels during the reporting month.

Complaint Log

There was one complaint in relation to the environmental impact received during the reporting month.

Date of Notification from EPD	Date of Complaint	Description of Complaint	Recommendatio ns / Actions	Close-Out Date / Status
18 Jul 2023	12 Jul 2023	 Complaint of construction dust arising from ground breaking work in the construction site of the Sports Park. Please ensure the work fulfil the relevant environmental legislations and their subsidiary regulations. Please take necessary environmental measures to minimize the environmental nuisance arising from the construction site. 	 Dust suppression measures (i.e. Water spraying) had been implemented during ground breaking works. Water truck had been working continuously around all haul road within the site. Water misting cannon had been installed to wet the area which water trucks cannot reach. Implementation of construction dust mitigation measures recommended in EIA's Environmental Mitigation Implementation Schedule. 	21 Jul 2023

Summary of Complaints in the Reporting Month

Notifications of Summons and Successful Prosecutions

There were no notifications of summons or prosecutions received during this reporting period.

Reporting Changes

There was no reporting change during the reporting period.

Future Key Issues

The future key issues to be undertaken in the upcoming month are:

KTSP

- Mobilization and lifting;
- Concreting;
- Excavation;
- Main Stadium pre-cast material delivery; and
- Public Sports Ground drainage layer construction

H/O Development

- Excavation; and
- Concreting.

1 Introduction

1.1 Background

The Project – hereby meaning the Designated Project (Items O.6 and O.7 Part I, Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO)), comprising the "Kai Tak Sports Park" (KTSP) project and the Hotel and Office (H/O) Development of NKIL 6607 adjoining the KTSP – is located in the Kai Tak Development (KTD) area in Kowloon.

The key construction works of the Project include:

(i) KTSP project

- a. a multi-purpose Main Stadium with a spectator capacity of around 50,000;
- b. a Public Sports Ground, with a spectator capacity of around 5,000;
- c. an Indoor Sports Centre with a multi-purpose main arena with a seating capacity of up to 10,000 and an ancillary sports hall with a seating capacity of 500;
- retail and dining outlets with a gross floor area (GFA) of about 57,000 square metres (m²), a bowling centre with 40 lanes and a health and wellness centre with about 2,500 m² GFA;
- e. more than 8 hectares of public open space including landscaped deck structures across Shing Kai Road, passive amenities and park features, outdoor ball courts; and
- f. ancillary facilities such as car parks, toilets, changing rooms, etc.

(ii) H/O Development

- g. an office development;
- h. a 300-room hotel with a GFA of about 16,000 m²; and
- i. ancillary facilities such as retails, car parks, etc.

In February 2019, Mott MacDonald Hong Kong Limited (MMHK) was commissioned by the Home Affairs Bureau (HAB) under Agreement No. CE 30/2018 (EP) to undertake the Environmental Team (ET) services for carrying out the Environmental Monitoring & Audit (EM&A) programme during the construction phase and first year of operation of the Project in accordance with the approved Environmental Impact Assessment (EIA) Report (Register No.: AEIAR-204/2017), EM&A Manual (including any subsequent amendments) and EP (including any subsequent variations of it and/or any further environmental permit issued under the EIAO). The current EP (No. EP-544/2017) was issued by EPD on 8 September 2017.

In July 2022, Home Affairs Bureau (HAB) has been reorganized as Culture, Sports and Tourism Bureau (CSTB).

This is the 52nd Monthly EM&A Report summarising the key findings of the construction phase EM&A programme from 1 to 31 July 2023 (the "reporting period") and is submitted to fulfil Condition 3.4 of the EP.

1.2 **Project Organisation**

The organisation chart and lines of communication with respect to the on-site environmental management structure of the key personnel are shown in <u>Appendix A</u>. The key personnel contact names and numbers are summarized in **Table 1.1**.

Table 1.1: 0	Contact	Information	of Key	/ Personnel

1.3 Works Area and Construction Programme

The construction works commenced on 8 April 2019. The works area of the Project is shown in **Appendix B**. The Construction Works Programme of the Project is provided in **Appendix C**.

1.4 Construction Works undertaken during the Reporting Period

A summary of construction activities undertaken during this reporting period is presented below:

KTSP

- Mobilization and lifting;
- Concreting;
- Excavation; and
- Main Stadium pre-cast material delivery.

H/O Development

- Excavation; and
- Concreting.

2 Air Quality Monitoring

2.1 Introduction

In accordance with the EM&A Manual of the Project, baseline 1-hour Total Suspended Particulates (TSP) levels at air quality monitoring stations AMS1 and AMS2 were established. Impact 1-hour TSP monitoring was conducted for at least three times every 6 days.

2.2 Monitoring Parameters, Frequency and Duration

Table 2.1 summarises the monitoring parameters, frequency and duration of impact air quality monitoring.

Table 2.1: Air Quality Monitoring Parameters, Frequency and Duration

Parameter	Frequency and Duration	
1-hour TSP	3 times every six-days	

2.3 Monitoring Locations

According to the EM&A Manual, a total of five air quality monitoring stations are identified for impact monitoring. Of these, two air sensitive receivers (AMS3 and AMS5) are planned residential use and were not available for baseline monitoring; the same two are also currently not available for impact monitoring.

Table 2.2 describes the impact air quality monitoring stations and **Figure 2.1** shows their locations.

Table 2.2: Construction Dust Monitoring Locations

Monitoring Station	Location	Status
AMS1	Hong Kong Society for the Blind Workshop, Roof Floor	Existing Air Sensitive Receiver (not accessible from 1 September 2022)
AMS2	Sky Tower, Podium of Tower 7	Existing Air Sensitive Receiver
AMS4	Retail Building in front of The Henley, Rooftop	Existing Air Sensitive Receiver
AMS3	Kai Tak Area 2B Site 4 (2B4) (residential use)	Planned Air Sensitive Receiver
AMS5	Kai Tak Area 1L Site 3 (1L3) (residential use)	Planned Air Sensitive Receiver

During the reporting period, monitoring locations AMS2 and AMS4 were set up at the proposed locations for impact monitoring.

Permission on setting up and carrying out impact monitoring works at AMS3 and AMS5 will be sought once each respective development is completed and occupied.

During the reporting period, monitoring station AMS1 was no longer open for impact monitoring from 1 September 2022, due to relocation of the Hong Kong Society for the Blind Workshop.

Temporary air quality monitoring station, AMS1-T, was used to conduct dust monitoring during the reporting period. Details of temporary alternative monitoring location was presented in Temporary Alternative Proposal for Monitoring Station as proposed by ET and agreed by IEC

403329/04/01/11.01/A | August 2023

dated 6 January 2021. The details of temporary monitoring station are described in **Table 2.3** and the location of temporary monitoring station is shown in **Figure 2.1**.

Table 2.3: Temporary Construction Dust Monitoring Location

Monitoring Station	Location	Status
AMS1-T	Agriculture, Fisheries and Conservation Department Kowloon Animal Management Centre, 102 Sung Wong Toi Road	Existing Air Sensitive Receiver

2.4 Monitoring Action and Limit Levels

The Action and Limit Levels for 1-hr TSP are provided in Table 2.4.

Table 2.4: Action and Limit Levels for 1-hour TSP

Monitoring Station	Action Level, µg/m ³	Limit Level, µg/m³	
AMS1 – Hong Kong Society for the Blind Workshop, Roof Floor	283	500	
AMS2 – Sky Tower, Podium of Tower 7	280	500	
AMS3 - Kai Tak Area 2B Site 4 (2B4) (residential use)	287*	500	
AMS4 - Kai Tak Area 1K Site 3 (1K3) (residential use)	287*	500	
AMS5 - Kai Tak Area 1L Site 3 (1L3) (residential use)	287*	500	

*Remarks: the Action Level for AMS3, AMS4 and AMS5 were derived from an alternative monitoring station AMS3-4-5 during the baseline monitoring.

The event and action plan is provided in Appendix D.

If exceedance(s) at these stations is/are recorded by the ET of the Project, it will carry out an investigation and findings will be reported in the monthly EM&A Report.

2.5 Monitoring Schedule for the Reporting Period

The schedule for air quality monitoring at AMS1-T, AMS2 and AMS4 in the reporting period is presented in **Appendix E**.

2.6 Monitoring Equipment

Portable direct reading dust meters were used to carry out the 1-hour TSP monitoring. The brand(s) and model(s) of the equipment used for air quality monitoring stations AMS1-T, AMS2 and AMS4 under this Project are given in **Table 2.5**.

Table 2.5: 1-hour TSP Monitoring Equipment

Equipment	Brand	Model No.
Portable direct reading dust meter	Sibata Digital Dust Monitor	LD-3B (S/N: 235780, 326285, 436553)

2.7 Monitoring Methodology

Field Monitoring

The measuring procedures of the 1-hour TSP dust meter are in accordance with the Manufacturer's Instruction Manual as follows:

- Turn the power on.
- Close the air collecting opening cover.
- Push the "TIME SETTING" switch to [BG].
- Push "START/STOP" switch to perform background measurement for 6 seconds.
- Turn the knob at SENSI ADJ position to insert the light scattering plate.
- Leave the equipment for 1 minute upon "SPAN CHECK" is indicated in the display.
- Push "START/STOP" switch to perform automatic sensitivity adjustment. This measurement takes 1 minute.
- Pull out the knob and return it to MEASURE position.
- Setting time period of 1 hour for the 1-hour TSP measurement.
- Push "START/STOP" to start the 1-hour TSP measurement.
- Regular checking of the time period setting to ensure monitoring time of 1 hour.

Maintenance and Calibration

- The 1-hour dust meter would be checked at 3-month intervals and calibrated at 1-year intervals throughout all stages of the air quality monitoring.
- Calibration records for direct dust meters are given in Appendix F.

2.8 Monitoring Results

The monitoring results for 1-hour TSP at AMS1-T, AMS2 and AMS4 are summarized in **Table 2.6**. Detailed impact air quality monitoring results are presented in <u>Appendix G</u>.

Table 2.6: Summary of 1-hour TSP Monitoring Results During the Reporting Period

Monitoring Station	Average, µg/m³	Min, µg/m³	Max, µg/m³	Action Level, μg/m³	Limit Level, µg/m³
AMS1-T	40	32	55	283	500
AMS2	32	24	40	280	500
AMS4	30	21	44	287	500

There was no Action and Limit Level exceedance of 1-hr TSP level recorded at station AMS1-T, AMS2 and AMS4 by the ET during the reporting period.

2.9 Wind Data

Wind data at Kai Tak automatic weather station collected from the Hong Kong Observatory (HKO) were used for the air quality monitoring and they are shown in <u>Appendix H</u>. It is considered that the wind data obtained at the existing Kai Tak wind station are representative of the Project area and could be used for undertaking the construction phase baseline and impact air quality monitoring programme for the Project.

The proposed use of the existing wind data from Kai Tak automatic weather station collected from HKO for wind data collection instead of setting up wind monitoring equipment near the monitoring stations was proposed by ET and agreed by IEC in accordance with the requirements as stated in Section 3.4.7 of the EM&A Manual of the Project.

3 Noise Monitoring

3.1 Introduction

In accordance with the EM&A Manual, impact noise monitoring was conducted at least once per week for each noise monitoring location during the construction phase of the Project.

3.2 Monitoring Parameters, Frequency and Duration

Table 3.1 summarises the monitoring parameters, frequency and duration of impact noise monitoring.

Table 3.1: Noise Monitoring Parameters, Frequency and Duration

Parameter	Frequency and Duration	
30-minutes measurement at each monitoring station between 0700 and 1900 on normal weekdays (Monday to Saturday). L_{eq} , L_{10} and L_{90} would be recorded.	At least once per week	

3.3 Monitoring Locations

According to the approved EM&A Manual, a total of seven noise monitoring stations were identified for the impact monitoring locations. Of these, four noise sensitive receivers are planned residential use (NMS1A, NMS2A, NMS3 and NMS5). **Table 3.2** describes the details of the monitoring stations and **Figure 3.1** shows the locations of noise monitoring stations.

Table 3.2: Construction Noise Monitoring Locations

Monitoring Station	Location Description	Status
NMS1	Hong Kong Society for the Blind	Existing Noise Sensitive
	Workshop, Roof Floor	Receiver
		(not accessible from 1 September 2022)
NMS2	Sky Tower, Podium of Tower 7	Existing Noise Sensitive
	•	Receiver
NMS4	Retail Building in front of The Henley, Rooftop	Existing Noise Sensitive Receiver
NMS1A	Sung Wong Toi Road Public	Planned Noise Sensitive
	Housing Site	Receiver
NMS2A	Sung Wong Toi Road CDA Site	Planned Noise Sensitive
	(mixed use)	Receiver
NMS3	Kai Tak Area 2B Site 4 (2B4)	Planned Noise Sensitive
	(residential use)	Receiver
NMS5	Kai Tak Area 1L Site 3 (1L3)	Planned Noise Sensitive
	(residential use)	Receiver

During the reporting period, monitoring locations NMS2 and NMS4 were set up at the proposed locations for impact monitoring.

Since NMS1A & NMS2A are planned (i.e. not existing) noise sensitive receivers, noise monitoring should be carried out initially at NMS1 and NMS2 respectively before the population intake of the planned developments. Once the planned developments are completed and occupied, NMS1A shall replace NMS1, while NMS2A shall replace NMS2. It is proposed that

the baseline noise level and Limit Level at NMS1A and NMS2A will be the same as those derived from the baseline monitoring data recorded at NMS1 and NMS2 respectively.

Permission on setting up and carrying out impact monitoring works at NMS3 and NMS5 will be sought once each respective development is completed and occupied.

During the reporting period, monitoring station NMS1 was no longer open for impact monitoring from 1 September 2022, due to relocation of the Hong Kong Society for the Blind Workshop. Temporary noise monitoring station, NMS1-T, was used to conduct noise monitoring during the reporting period. Details of temporary alternative monitoring locations are presented in Temporary Alternative Proposal for Monitoring Station as proposed by ET and agreed by IEC dated 6 January 2021. The details of temporary monitoring station are described in **Table 3.3** and the location of noise monitoring station is shown in **Figure 3.1**

Table 3.3: Temporary Construction Noise Monitoring Location

Monitoring Station	Location Description	Status	Type of Measurement
NMS1-T	Agriculture, Fisheries and Conservation Department Kowloon Animal Management Centre, 102 Sung Wong Toi Road	Exiting Noise Sensitive Receiver	Façade

3.4 Action and Limit Levels

The Action and Limit Levels for construction noise are defined in Table 3.4.

Monitoring Station	Time Period	Action Level	Limit Level
NMS1-T			
NMS2	0700 – 1900 hours on normal weekdays	When one documented complaint is received	75 dB(A)
NMS4	normal weekdays	complaint is received	

Table 3.4: Action and Limit Level for Construction Noise

The event and action plan is provided in Appendix D.

If exceedance(s) at these stations is/are recorded by the ET of the Project, it will carry out an investigation and findings will be reported in the monthly EM&A Report.

3.5 Monitoring Schedule for the Reporting Period

The schedule for noise monitoring in the reporting period is presented in Appendix E.

3.6 Monitoring Equipment

Noise monitoring was performed using sound level meters at each designed monitoring station. The sound level meters deployed comply with the International Electrotechnical Commission Publications (IEC) 651:1979 (Type 1) and 804:1985 (Type 1) specifications. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Brand and model of the equipment used for noise monitoring under this Project is given in **Table 3.5**

Table 3.5: Noise Monitoring Equipment

Equipment	Brand	Model No.
Integrated Sound Level Meter	Rion	NL-52 (S/N 00131627)
Acoustic Calibrator	LARSON DAVIS	CAL200 (S/N 16878)

3.7 Monitoring Methodology

- Façade and Free Field measurements were made at the monitoring locations.
- For Façade measurement, the microphone head of the sound level meter was positioned 1m exterior of the noise sensitive façade and lowered sufficiently so that the building's external wall acts as a reflecting surface.
- For free field, the microphone of the Sound Level Meter was set at least 1.2 m above the ground.
- A correction of +3dB(A) was made for free field measurement.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
 - frequency weighting: A
 - time weighting: Fast
 - time measurement: 30-minute intervals (between 0700-1900 on normal weekdays)
- Prior to and after each noise measurement, the meter was calibrated using a Calibrator for 94 dB at 1 kHz. If the difference in the calibration level before and after measurement was more than 1 dB, the measurement would be considered invalid and repeated after the recalibration or repair of the equipment.
- During the monitoring period, the L_{eq}, L₁₀ and L₉₀ were recorded. In addition, any site observations and noise sources were recorded on a standard record sheet.
- Noise measurements were not made in presence of fog, rain, wind with a steady speed exceeding 5m/s or wind with gusts exceeding 10m/s.

Maintenance and Calibration

- The microphone head of the sound level meter and calibrator is cleaned with soft cloth at quarterly intervals.
- The sound level meter and calibrator are sent to the supplier or HOKLAS laboratory to check and calibrate at yearly intervals.
- Calibration records are shown in Appendix F.

3.8 Monitoring Results

The monitoring results for construction noise are summarized in **Table 3.6**. Detailed impact noise monitoring results and relevant graphical plots are presented in <u>Appendix G</u>.

Table 3.6: Summary of Construction Noise Monitoring Results During the ReportingPeriod

	I	Measured Noise Le	vel L _{eq (30 mins)} , dB(A	A)
Monitoring Station	Average	Min	Max	Limit Level
NMS1-T	72	71	73	75
NMS2	69	69	70	75
NMS4	65	64	65	75

No noise exceedances were recorded at stations NMS1-T, NMS2 and NMS4 by ET during the reporting period.

4 **Environmental Site and Audit**

4.1 **Site Inspection**

Site inspections were carried out by ET on a weekly basis to monitor the implementation of proper environmental pollution control mitigation measures for the Project. Key observations were recorded in the site inspection checklist and passed to the Contracted Party together with the appropriate recommended mitigation measures where necessary. During the reporting period, site inspections were carried out on 5, 12, 19 and 25 July 2023. Joint IEC site inspections were carried out on 12 and 25 July 2023.

Bi-weekly landscape and visual site audit was carried out on 5 and 19 July 2023. The landscape and visual audit have been audited by Registered Landscape Architect (RLA). No major observations of landscape and visual impact were identified. The result findings were summarised in Appendix K.

Key observations during the site inspections are described in Table 4.1.

Inspection Date	Key Observations	Recommendations / Actions	Close-Out Date / Status
Kai Tak Sports Park			
5 Jul 2023	Accumulation of general refuse mixing with stagnant water was observed at southern site.	The contractor was reminded to store general refuse properly to avoid contamination.	12 Jul 2023
5 Jul 2023	Accumulation of general refuse on the floor was observed at southern site.	The contractor was reminded to dispose of general refuse properly in enclosed rubbish bin.	12 Jul 2023
12 Jul 2023	Dry haul road was observed at northern site.	The contractor was reminded to provide water spraying for the haul road to maintain wet surface.	19 Jul 2023
12 Jul 2023	Rubbish bin without cover was observed at northern site.	The contractor was reminded to store rubbish bin properly at covered rubbish bin.	19 Jul 2023
12 Jul 2023	Accumulation of general refuse on the ground was observed at northern site.	The contractor was reminded to dispose of the general refuse properly.	19 Jul 2923
25 Jul 2023	Chemical container without drip trays were observed at northern site.	The contractor was reminded to provide drip trays for the chemical container.	2 Aug 2023
25 Jul 2023	Accumulation of general refuse on the floor was observed on site.	The contractor was reminded to dispose of the general refuse properly.	2 Aug 2023
25 Jul 2023	No NRMM label was displayed for the generator at the southern site.	The contractor was reminded to display NRMM label for the generator on site.	2 Aug 2023

Table 4.1: Summary of Site Inspections and Recommendations

Inspection Date	Key Observations	Recommendations / Actions	Close-Out Date / Status
Hotel and Office Development			
5 Jul 2023	Dry haul road was observed on site.	The contractor was reminded to provide water spraying for the haul road.	12 Jul 2023
25 Jul 2023	Accumulation of stockpile without covering was observed.	The contractor was reminded to provide covering for the stockpile on site.	2 Aug 2023

4.2 Advice on the Solid and Liquid Waste Management Status

KTSP

The Contracted Party was registered as a chemical waste producer for the Project. Construction and demolition (C&D) material sorting was carried out on site. Sufficient numbers of receptacles were provided for general refuse collection and sorting. Excavated inert C&D materials were reused to minimise the disposal of C&D waste to public fill.

The Contracted Party was reminded to maintain on site waste sorting and recording system and maximize reuse / recycling of C&D wastes, whenever these are generated.

H/O Development

Construction and demolition (C&D) material sorting was carried out on site. Sufficient numbers of receptacles were provided for general refuse collection and sorting. Excavated inert C&D materials were designated for on temporary site storage and collected for the disposal to public fill.

The Contractor was reminded to maintain on site waste sorting and maximize reuse / recycling of C&D wastes, whenever these are generated.

The monthly summary of waste flow table is detailed in Appendix I.

4.3 Environmental Licenses and Permits

The valid environmental licenses and permits for the Project during the reporting period are summarized in **Appendix J**.

4.4 Implementation Status of Environmental Mitigation Measures

In response to the site audit findings, the Contracted Party carried out corrective actions.

A summary of the environmental mitigation measures implementation status is presented in **Appendix K**. Most of the necessary mitigation measures were implemented properly.

4.5 Summary of Exceedance of the Environmental Quality Performance Limit

Air Quality

No Action and Limit Level exceedances of 1-hour TSP level was recorded at AMS1-T, AMS2 and AMS4 during the reporting period.

Noise

No Action and Limit Level exceedances for noise levels was recorded at NMS1-T, NMS2 and NMS4 during the reporting month.

4.6 Summary of Complaints, Notification of Summons and Successful Prosecution

Complaints

There was one complaint received in relation to the environmental impact during the reporting month.

Date of Notification from EPD	Date of Complaint	Description of Complaint	Recommendatio ns / Actions	Close-Out Date / Status
18 Jul 2023	12 Jul 2023	 Complaint of construction dust arising from ground breaking work in the construction site of the Sports Park. Please ensure the work fulfil the relevant environmental legislations and their subsidiary regulations. Please take necessary environmental measures to minimize the environmental nuisance arising from the construction site. 	 Dust suppression measures (i.e. Water spraying) had been implemented during ground breaking works. Water truck had been working continuously around all haul road within the site. Water misting cannon had been installed to wet the area which water trucks cannot reach. Implementation of construction dust mitigation measures recommended in EIA's Environmental Mitigation Implementation Schedule. 	21 Jul 2023

Table 4.2: Summary of Complaints in the Reporting Month

Notification of Summons and Successful Prosecution

No notification of summons or prosecutions was received during the reporting period.

Statistics on notifications of summons and successful prosecutions are summarized in **Appendix L**.

5 Future Key Issues

5.1 Construction Programme for the Coming Months

As informed by the Contracted Party, the major construction activities for the next reporting period (August 2023) are summarized in **Table 5.1**.

Site Area	Description of Activities
 Kai Tak Sports Park 	 Mobilization and lifting;
	 Concreting;
	 Excavation;
	 Main Stadium pre-cast material delivery; and
	 Public Sports Ground drainage layer construction
 Hotel and Office Development 	 Excavation; and
	 Concreting.

The tentative schedule for weekly site inspection and monitoring for air quality and noise for the next reporting period is provided in <u>Appendix E</u>.

6 Conclusions

6.1 Conclusions

General

The construction works for the Project commenced on 8 April 2019.

The ET of the Project has implemented the air quality and noise environmental impact monitoring under the construction phase EM&A programme during the reporting period.

Breaches of Action and Limit Levels

Air Quality

No Action or Limit Level exceedances of 1-hour TSP level was recorded during the reporting period.

Noise

No Action or Limit Level exceedances for noise level was recorded during the reporting period.

Environmental Site Inspections

Environmental site inspections were carried out four times during the reporting period. Recommendations on remedial actions were given to the Contracted Party for the deficiencies identified during the site inspections.

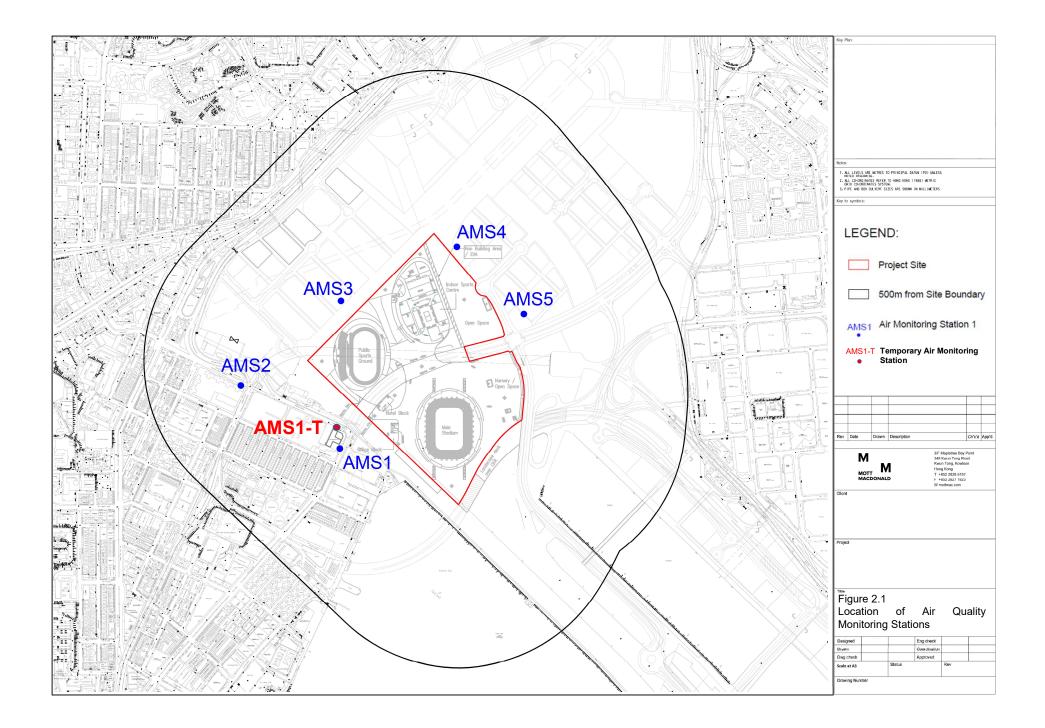

Complaints

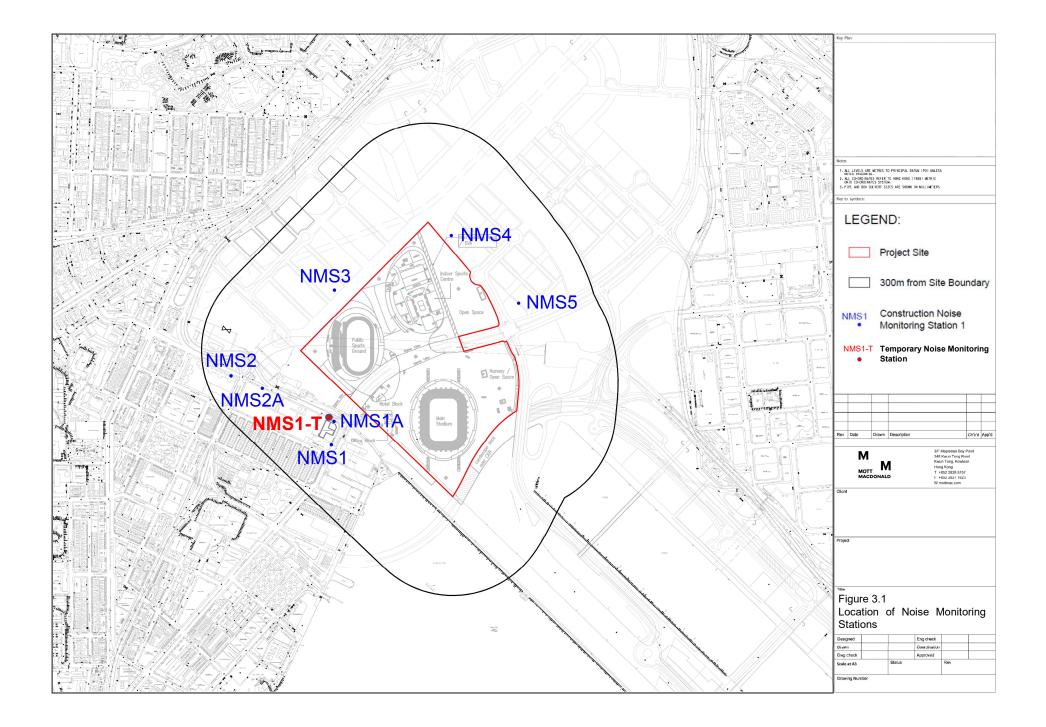

There was one complaint received in relation to the environmental impact during the reporting period. Complaint investigation was conducted and mitigation measures were implemented.

Notifications of Summons and Successful Prosecutions

There were no notifications of summons or prosecutions received during the reporting period.

Appendix D. Event and Action Plan

Should non-compliance of the air quality criteria occur, actions in accordance with the Event and Action Plan in **Table D.1** and **Table D.2** shall be carried out.

Table D.1:	Event and Action Plan for Construction Air Quality ((Action Level)
------------	--	----------------

Event	Action						
	ET	IEC	SOR	Contracted Party			
Action Level							
Exceedance for one sample	 Inform IEC, SOR and Contracted Party; Identify source, investigate the causes of exceedance and propose remedial measures; Repeat measurement to confirm finding. 	 Check monitoring data submitted by ET; Check Contracted Party's working method. 	1. Notify Contracted Party.	 Rectify any unacceptable practice; Amend working methods if appropriate. 			
Exceedance for two or more consecutive samples	 Inform IEC, SOR and Contracted Party; Identify source; Advise the SOR on the effectiveness of the proposed remedial measures; Repeat measurements to confirm findings; Increase monitoring frequency to daily; Discuss with IEC, SOR and Contracted Party on remedial actions required; If exceedance continues, arrange meeting with IEC and SOR; If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by ET; Check Contracted Party's working method; Discuss with ET and Contracted Party on possible remedial measures; Advise the ET/SOR on the effectiveness of the proposed remedial measures; Supervise Implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contracted Party; Ensure remedial measures properly implemented. 	 Submit proposals for remedial to SOR and IEC within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate.

Event	Action							
	ET	IEC	SOR	Contracted Party				
Limit Level								
Exceedance for one sample	 Inform IEC, SOR, Contracted Party and EPD; Identify source, investigate the causes of exceedance and propose remedial measures; Repeat measurement to confirm finding; Increase monitoring frequency to daily; Assess effectiveness of Contracted Party's remedial actions and keep IEC, EPD and SOR informed of the results. 	 Check monitoring data submitted by ET; Check Contracted Party's working method; Discuss with ET and Contracted Party on possible remedial measures; Advise the SOR on the effectiveness of the proposed remedial measures; Supervise implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contracted Party; Ensure remedial measures properly implemented. 	 Take immediate action to avoid furthe exceedance; Discuss with ET and IEC on remedial actions; Submit proposals for remedial actions t IEC within 3 working days of notification; Implement the agreed proposals; Amend proposal if appropriate. 				
Exceedance for two or more consecutive samples	 Notify IEC, SOR, Contracted Party and EPD; Identify source; Repeat measurement to confirm findings; Increase monitoring frequency to daily; Carry out analysis of Contracted Party's working procedures to determine possible mitigation to be implemented; Arrange meeting with IEC and SOR and Contracted Party to discuss the remedial actions to be taken; Assess effectiveness of Contracted Party's remedial actions and keep IEC, EPD and SOR informed of the results; If exceedance stops, cease additional monitoring. 	 Check monitoring data submitted by ET; Check Contracted Party's working method; Discuss amongst SOR, ET, and Contracted Party on the potential remedial actions; Review Contracted Party's remedial actions whenever necessary to assure their effectiveness and advise the SOR accordingly; Supervise the implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contracted Party; 3. In consultation with the IEC, agree with the Contracted Party on the remedial measures to be implemented; Ensure remedial measures properly implemented; If exceedance continues, consider what portion of the work is responsible and instruct the Contracted Party to terminate that portion of work until the exceedance ceases. 	 Take immediate action to avoid furthe exceedance; Discuss with ET and IEC on remedial actions; Submit proposals for remedial actions t SOR and IEC within 5 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control Stop the relevant portion of works as determined by the SOR until the exceedance ceases. 				

Table D.2: Event and Action Plan for Construction Air Quality (Limit Level)

Should non-compliance of the noise criteria occur, actions in accordance with the Event and Action Plan in **Table D.3** shall be carried out.

Event	Action							
	ET	IEC	SOR	Contracted Party				
Action Level	 Notify IEC, SOR and Contracted Party of exceedance; Identify source; Investigate the causes of exceedance and propose remedial measures; Report the results of investigation to the IEC, SOR and Contracted Party; Discuss with the IEC, SOR and Contracted Party and formulate remedial measures; Increase monitoring frequency to check mitigation effectiveness. 	 Review the analysed results submitted by the ET; Review the proposed remedial measures by the Contracted Party and advise the SOR accordingly; Supervise the implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contracted Party; Require Contracted Party to propose remedial measures for the analysed noise problem; Ensure remedial measures are properly implemented 	 Submit noise mitigation proposals to SOR with copy to ET and IEC; Implement noise mitigation proposals. 				
Limit Level	 Inform IEC, SOR, EPD and Contracted Party; Identify source; Repeat measurements to confirm findings; Increase monitoring frequency; Carry out analysis of Contracted Party's working procedures to determine possible mitigation to be implemented; Inform IEC, SOR and EPD the causes and actions taken for the exceedances; Assess effectiveness of Contracted Party's remedial actions and keep IEC, EPD and SOR informed of the results; If exceedance stops, cease additional monitoring. 	 Discuss amongst SOR, ET, and Contracted Party on the potential remedial actions; Review Contracted Party's remedial actions whenever necessary to assure their effectiveness and advise the SOR accordingly; Supervise the implementation of remedial measures. 	 Confirm receipt of notification of failure in writing; Notify Contracted Party; Require Contracted Party to propose remedial measures for the analysed noise problem; Ensure remedial measures are properly implemented; If exceedance continues, investigate what portion of the work is responsible and instruct the Contracted Party to terminate that portion of work until the exceedance ceases. 	 Take immediate action to avoid further exceedance; Submit proposals for remedial actions to SOR with copy to ET and IEC within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control; Terminate the relevant portion of works as determined by the SOR until the exceedance ceases.

the allowable tolerance.

The test equipment used for calibration are traceable to National Standards via:

- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory

Date of receipt: 07 June 2023

Date of calibration: 08 June 2023

Date of NEXT calibration: 07 June 2024

Calibrated by:

Calibration Technician

Date of issue: 08 June 2023

Certificate No.: APJ23-029-CC001

Certified by:

Mr. Ng Yan Wa Laboratory Manager

Room 422,Leader Industrial Centre,57-59 Au Pui Wan Street ,Fo Tan, Shatin,N.T.,Hong Kong Tel: (852) 2668 3423 Fax:(852) 2668 6946 Homepage: http://www.aa-lab.com E-mail : inquiry@aa-lab.com

1. Calibration Precaution:

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

2. Calibration Conditions:

Air Temperature:	22.5 °C
Air Pressure:	1006 hPa
Relative Humidity:	<u>64.5</u> %

3. Calibration Equipment:

5. Calibration Results Applied

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 61672 Class 1.

Uncertainties of Applied Value:

94 dB	31.5 Hz	± 0.05
	63 Hz	± 0.05
	125 Hz	± 0.05
	250 Hz	± 0.05
	500 Hz	± 0.05
	1000 Hz	± 0.05
	2000 Hz	± 0.05
	4000 Hz	± 0.05
	8000 Hz	± 0.10
104 dB	1000 Hz	± 0.05
114 dB	1000 Hz	± 0.05

The uncertainties are evaluated for a 95% confidence level.

Note:

The values given in this certification only related to the values measured at the time of the calibration and any uncertainties quoted will not allow for the equipment long-term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the calibration. (A+A)*L shall not be liable for any loss or damage resulting from the use of the equipment.

Data for 1-hour TSP Monitoring at Station AMS1/AMS1-T during the Reporting Month

* During the reporting period, monitoring station AMS1 was no longer open for impact monitoring from 1 September 2022, due to the relocation of the Hong Kong Society for the Blind Workshop. Temporary air quality monitoring station, AMS1-T was used to conduct dust monitoring in September 2022. Details of temporary alternative monitoring locations are presented in Temporary Alternative Proposal for Monitoring Station as proposed by ET and agreed by IEC dated 6 January 2021.

Total C&D waste generated Total C&D waste generated (excluding excavated materials) Total recycled C&D waste % of recycled C&D waste for BEAM Plus MA10 or MA11

Notes: (1) Metal, paper & plastic were collected by recycler.

(2) The performance target of waste recycling are specified in the Contract.

(3) The waste flow table shall also include C&D materials that are specified in the Contract to be imported for use at the Site.

(4) Plastics refer to plastic bottles/ containers, plastic/ foam from packaging material.

(5) Broken concrete for recycling into aggregates.

(6) Excavated materials/waste will NOT be considered as part of construction waste. It should be excluded in the calculation.

(7) Disposal of inert waste to public fill or sorting facilities will NOT be considered as recycled waste.

(8)Disposal record for April 2023 and May 2023 have been updated according to the latest information from contractor in June 2023.

(9) Recycling record for metals, papers and plastics have been updated according to the latest information from contractor in June 2023.

Appendix K. Environmental Mitigation Measures Implementation Status

Air Quality – Recommended Mitigation Measures

Air Quality Mitigation Measures during construction		entation Itus
	KTSP	H/O
Good housekeeping to minimize dust generation, e.g. by properly handling and storing dusty materials	\checkmark	\checkmark
• Store cement in shelter with 3 sides and the top covered by impervious materials if the stack exceeds 20 bags	\checkmark	~
 Cement delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed 	N/A	N/A
 Loading, unloading, transfer, handling or storage of bulk cement should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system 	~	✓
 Dusty materials (e.g. debris) should be wetted by misting / water-spraying before any loading, unloading, transfer or transport operation 	\checkmark	~
 Any skip hoist for material transport should be fully enclosed by impervious sheeting 	\checkmark	\checkmark
 Surfaces where any pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation takes place should be sprayed with water or a dust suppression chemical continuously 	~	~
 Any area that involves demolition activities should be sprayed with water or a dust suppression chemical immediately prior to, during and immediately after the activities to maintain the entire surface wet 	~	~
Excavation area should be minimized as far as possible	√	✓
Stockpile of dusty materials should not be extended beyond the pedestrian barriers, fencing or traffic cones	✓	✓
• Excavated or stockpile of dusty material should be covered entirely by impervious sheeting or sprayed with water to maintain the entire surface wet, and then removed, backfilled or reinstated where practicable within 24 hours of the excavation or unloading	✓	Ρ
 Dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads 	✓	~
Properly fitted side and tail boards are necessary for any vehicle with open load area	√	✓
 While transporting materials that potentially create dust (e.g. debris), materials should not be loaded higher than side and tail boards, and should be fully covered by tarpaulin or similar materials which extent at least 300 mm over the edges of the side and tail boards to prevent leakage. 	✓	√
Limit the maximum vehicle speed within the site to 10km/hr	✓	\checkmark
Haulage and delivery vehicles should be confined to designated roads	√	~
 Every main haul road should either be 1.) paved with concrete and kept clear of dusty materials, or 2.) sprayed or watered to maintain the entire road surface wet 	Ρ	✓
All on-site unpaved roads should be compacted and kept free of lose materials as possible	✓	\checkmark
 Provide vehicle washing (e.g. wheel washing bay & high pressure water jet where practicable) at every vehicle exit point for cleaning vehicle body and wheels 	✓	✓
 The vehicle washing area and the road between washing area and site exit should be paved with concrete, bituminous or other hardcores 	✓	~
• The portion of any road leading only to construction site that is within 30m of a vehicle entrance or exit should be kept clear of dusty materials.	✓	~
 Dusty materials on every vehicle's body and wheels should be removed in washing area before leaving the site 	✓	✓

403329/04/01/11.01/A | August 2023 C:\Users\cha59360\Mott MacDonald\Kai Tak Sports Park - Environmental Team - Do\04 Deliverables\01 EP submissions\11 EP 3.4 Monthly EM&A Report\(52) Jul 2023\KTSP Monthly EM&A (52) Jul 2023.docx

Air Quality Mitigation Measures during construction		entation Itus
	KTSP	H/O
Regular maintenance of all plant equipment	\checkmark	✓
 Throttle down or switch off unused machines or machine in intermittent use 	✓	\checkmark
 If the site is adjacent to area where accessible to the public (e.g. road and service lane etc.), hoarding of not less than 2.4 m high from ground level should be erected along the adjoining the entire length of that portion of the site boundary, except for a site entrance or exit. The hoarding should be well maintained throughout the construction period. 	✓	~
 Where a scaffolding is erected around the perimeter of a building under construction, effective dust screens, sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building, or a canopy should be provided from the first floor level up to the highest level of the scaffolding 	~	~
 Exposed earth should be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shortcrete or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies 	~	~
Carry out air quality monitoring throughout the construction period	✓	✓
 Carry out weekly site inspection to audit the implementation of mitigation measures 	✓	✓
 Regular watering once per hour on exposed worksites and haul road with an equivalent intensity of not less than 1.3L/m3 to achieve 91.7% dust removal efficiency. 	✓	✓
 Provision of electrical vehicle (EV) charging facilities in at least one-third of the car parking spaces for private cars. Provision of EV charging enabling facilities in all car parking spaces provided for private cars. 	\checkmark	N/A
Non-Road Mobile Machinery (NRMMs)		
 All NRMMs operated on-site are approved or exempted (as the case may be) and affixed with the requisite approval/exemption labels under the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation or are in the process of application for such approval/exemption during the relevant grace period. 	Ρ	~

Noise – Recommended Mitigation Measures

Noise Mitigation Measures during construction	Implementation Status		
	KTSP	H/O	
 Adopt good site practice, such as throttle down or switch off equipment unused or intermittently used between works 	\checkmark	✓	
 Regular maintenance of equipment to prevent noise emission due to impair 	√	✓	
 Position mobile noisy equipment in locations away from NSRs and point the noise sources to directions away from NSRs 	✓	✓	
Use silencer or muffler for equipment	✓	\checkmark	
Make good use structures for noise screening	✓	✓	
 Use Quality Powered Mechanical Equipment (QPME) and quiet equipment which produces lower noise level. 	✓	✓	
• Erect movable noise barrier of 3m height to shed large plant equipment (e.g. breaker, backhoe & mobile crane) or hand-held items (e.g. poker, wood saw, power rammer & compactor) near low-rise NSR. Where necessary, special design (e.g. with noise absorbing material or bend top) should be adopted. The barrier's length should be at least five times greater than its height, and the minimum surface density is 10 kg/m2. Alternatively, acoustic shed, enclosure or silencer (for generator, air compressor and concrete pump) or acoustic mat (for piling) can be adopted.	4	N/A	
 Carry out regular site inspection to audit the implementation of mitigation measures 	\checkmark	✓	
 Carry out noise monitoring throughout the construction period 	\checkmark	✓	

Water Quality – Recommended Mitigation Measures

Water	Quality Mitigation Measures during construction	Impleme Stat	
		KTSP	H/O
 Practi 	ices outlined in ProPECC PN 1/94 Construction Site Drainage should be adopted.	\checkmark	\checkmark
	I perimeter channels in the works areas to intercept runoff from boundary prior to the nencement of any earthwork	✓	√
 To provid 	event storm runoff from washing across exposed soil surfaces, intercepting channels should be ded.	✓	√
of reg	age channels are required to convey site runoff to sand/silt traps and oil interceptors. Provision gular cleaning and maintenance to ensure the normal operation of these facilities throughout the ruction period.	\checkmark	✓
	practical options for the diversion and realignment of drainage should comply with both eering and environmental requirements	√	√
	num distances of 100 m should be maintained between the discharge points of construction site f and the existing WSD saltwater intake and EMSD cooling water intake.	✓	✓
opera maint gener	ollowing good site measures should be adopted for the use of the existing barging facilities being ated by the MTR SCL Project: - All vessels should be sized so that adequate clearance is tained between vessels and the seabed in all tide conditions, to ensure that undue turbidity is not rated by turbulence from vessel movement or propeller wash.	N/A	N/A
of ma - Con	istruction activities should not cause foam, oil, grease, scum, litter or other objectionable matter present on the water within the site.		
- Load	ding of barges and hoppers should be controlled to prevent splashing of material into the unding water.		
	ges or hoppers should not be filled to a level that will cause the overflow of materials or polluted during loading or transportation.		
	unoff and wastewater generated from the works areas should be treated so that it satisfies all the lards listed in the TM-DSS.	✓	~
• Reus	se and recycling of the treated effluent from construction site runoff.	✓	\checkmark
	kly site audit should be carried out to check the implementation status of the recommended quality impact mitigation measures throughout construction period.	✓	√
• The o seaso	construction programme should be properly planned to minimise soil excavation, if any, in rainy ons.	✓	√
 Any e 	exposed soil surfaces should be properly protected to minimise dust emission.	✓	✓
 In are 	eas where a large amount of exposed soils exist, earth bunds or sand bags should be provided.	✓	√
 Expos 	sed stockpiles should be covered with tarpaulin or impervious sheets at all times.	✓	✓
	tockpiles of materials should be placed at locations away from any stream courses so as to releasing materials into the water bodies.	✓	√
• Final	surfaces of earthworks should be compacted and protected by permanent work.	✓	\checkmark
	roads should be paved with concrete and the temporary access roads protected using crushed or gravel, wherever practicable.	✓	\checkmark
	el washing facilities should be provided at all site exits to ensure that earth, mud and debris I not be carried out of the works areas by vehicles.	\checkmark	√
	d site practices should be adopted to keep the site dry and tidy, such as clean the rubbish and on the construction sites.	\checkmark	✓
Adeq	quate temporary site drainage and pumping should be provided, if necessary.	\checkmark	\checkmark
from a	ide sufficient temporary toilets in the works areas. The toilet facilities should be more than 30 m any watercourse. A licensed waste collector should be deployed to clean the temporary toilets on ular basis.	✓	✓
aregi			

Water Quality Mitigation Measures during construction	Implementatio Status		
	KTSP	H/O	
 Contractor must register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. 	✓	✓	
 Any service shop and maintenance facilities should be located on hard standings within a bunded area, and sumps and oil interceptors should be provided. Maintenance of vehicles and equipment involving activities with potential for leakage and spillage should only be undertaken within the areas appropriately equipped to control these discharges. 	✓	~	
Clean the construction sites on a regular basis.	✓	✓	
 Oil interceptor in car parking area shall be designed and constructed according to Practice Note for Authorized Persons, Registered Structural Engineers and Registered Geotechnical Engineers, APP- 46 (PNAP 124) 	✓	N/A	
 Provide two sequential storage tanks to contain surface water with residual fertilizers and pesticides and third holding tank for incidental rainstorm 	N/A	N/A	
Sewerage and Sewage Treatment Implications			
 Implementation of Sewer No. 1 and Sewer No.2 as proposed in Sections 7.2.2 - 7.2.3 of the EIA Report 	\checkmark	✓	

Waste Management – Recommended Mitigation Measures

Waste Management Mitigation Measures during construction	Implemer State	
	KTSP	H/O
 Inert C&D materials (or public fills) will be used to form the ramps and other filling area as far as civil engineering design permits. 	~	√
 The contractor should formulate waste management measures on waste minimization, storage, handling and disposal in a Waste Management Plan as part of Environmental Management Plan. 	✓	~
Adopt good site practice as follows:	Р	\checkmark
 Provide training to workers on site cleanliness, waste management (waste reduction, reuse and recycle) and chemical handling procedures 		
- Provide sufficient waste collection points and regular removal		
- Cover waste materials with tarpaulin or in enclosure during transportation		
- Maintain drainage systems, sumps and oil interceptors		
- Sort out chemical waste for proper handling and treatment onsite or offsite		
 Adopt waste reduction measures as follows: 	\checkmark	\checkmark
 Allocate area/containers for sorting, recovering and storing waste for reuse, recycle or disposal (e.g. demolition debris and excavated materials, general refuse like aluminium cans.) Remove waste from the Site for sorting once generated if no suitable space can be identified. 		
- Allocate area for proper storage of construction materials to prevent contamination		
- Minimize wastage through careful planning and avoiding over-purchase of construction materials		
Store waste materials properly as follows:	Р	\checkmark
- Avoid contamination by proper handling and storing waste		
- Prevent erosion by covering waste		
- Apply water spray on excavated materials		
- Maintain and clean storage area regularly		
- Sort and stockpile different materials at designated location to enhance reuse		
 Apply for relevant waste disposal permits in accordance with the Waste Disposal Ordinance (Cap. 354), Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 345) and the Land (Miscellaneous Provisions) Ordinance (Cap. 28), Dumping at Sea Ordinance (Cap. 466). 	~	\checkmark
 Hire licensed waste disposal contractors for waste collection and removal. Dispose waste at licensed waste disposal facilities. 	✓	✓
 Implement trip-ticket system for recording the amount of waste generated, recycled and disposed, including chemical wastes 	~	√

Waste Management Mitigation Measures during construction	Implementation Status	
	KTSP	H/O
 Reduce water content in wet spoil generated from piling work by mixing with dry materials. Only dispose treated spoil with less than 25% dry density to Public Fill Reception Facilities 	\checkmark	~
 Dispose dry waste or waste with less than 70% water content by weight to landfill 	\checkmark	\checkmark
 Follow the Code of Practice on the Packaging, Labelling and Storage of Chemical Waste as follows: Store chemical wastes with suitable containers. Seal and maintain the container to avoid leakage or spillage during storage, handling and transport Label chemical waste containers in both English and Chinese with instructions in accordance to Schedule 2 of the Waste Disposal (Chemical Waste) (General) Regulation 	V	~
- The container capacity should be smaller than 450 litres unless agreed by the EPD		
 Comply with the requirement of the chemical storage area: Store only chemical waste and label clearly the chemical characters of the waste Have at least 3 sides enclosed and protected from rainfall with cover Provide sufficient ventilation Have impermeable floor and has bunds to contain 110% of the capacity of the largest container or 20% of the total volume of the stored waste in the area, whichever is larger 	Ρ	1
- Adequately spaced incompatible materials		
 Transfer used lubricants, waste oils and other chemicals to oil recycling companies, if possible, and empty oil drums for reuse or refill. No direct or indirect discharge is permitted 	√	√
 Hire licensed chemical waste disposal contractors for waste collection and removal. Dispose chemical waste at the approved Chemical Waste Treatment Centre at Tsing Yi or other licensed facility 	~	√
 Hire reputable waste collector to separately collect and dispose general refuse from other wastes. Cover the waste to prevent being blown away 	√	√
 The hauling of C&D materials shall follow established environmental mitigation measures as stated in Practice Note for Registered Contractors No. 17 "Control of Environmental Nuisance from Construction Sites" issued by the Buildings Department 	✓	~
 Provide recycling bins for sorting out recyclables for collection by recycling companies. Non- recyclables should be removed to designated landfills every day by licensed collectors to prevent environmental and health nuisance. 	✓	~
• Organize training and reminders to site staff on waste minimization through avoidance and reduction, reusing and recycling	✓	√
 Bentonite slurry which will not be reused shall be disposed of from the Site as soon as possible. Residual used dewatered bentonite slurry should be disposed to a public filling area and liquid bentonite slurry if mixed with inert fill material should be disposed to a public filling area. 	N/A	N/A
 If chemical wastes were to be produced at the construction site, the Contractor would be required to register with the EPD as a Chemical Waste Producer, and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the waste such as explosive, flammable, oxidizing, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport the chemical wastes. The licensed collector shall deliver the waste to the Chemical Waste Treatment Centre at Tsing Yi, or 	V	✓
o the licensed collector shall deliver the waste to the Chemical Waste Treatment Centre at Tsing Yi, or other licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation		
 Carry out weekly site inspection to check the implementation status of the recommended waste management measures. 	\checkmark	~
 The barging of C&DM for this Project shall use the existing Kai Tak Barging Facility (KTBF), or otherwise approved by the Director. 	N/A	N/A

Ecology – Recommended Mitigation Measures

Ecology Mitigation Measures during construction		Implementation Status	
	KTSP	H/O	
 Erection of hoarding, fencing or provision of clear demarcation of work zone 	✓	\checkmark	
 Designate areas for placement of equipment, building materials and wastes away from drainage channels 	\checkmark	✓	
 Carry out weekly site inspection to check the implementation status and the effectiveness of the proposed mitigation measures 	\checkmark	✓	

Landscape and Visual – Recommended Mitigation Measures

andscape and Visual Mitigation Measures during construction		Implementation Status	
	KTSP	H/O	
Construction Lighting Control	✓	~	
 All security floodlights for construction sites should be equipped with adjustable shields, frosted diffusers and reflective covers, and be controlled to minimize light pollution and night-time glare to the visual sensitive receivers (VSRs). 			
Temporary Landscape Treatments	✓	N/A	
 Including vertical greening, pot planting and application of green roofing to site offices, Hydroseeding of site formation areas and short term greening of site boundaries and land not immediately developed. 			
Decoration of Hoarding	✓	✓	
 Erection of screen hoardings should be designed appropriately to be compatible with the existing urban context, either brightly and imaginatively or with visually unobtrusive design and colours where more appropriate. 			
All security floodlights for construction sites shall be equipped with adjustable shield, frosted diffusers and reflective covers, and be carefully controlled to minimize light pollution and night-time glare to nearby receivers	~	√	
Site inspection should be undertaken once every two weeks.	✓	✓	
Compensatory Tree Planting	N/A	N/A	
- A new parkland area is created in the project development to be used for the implementation of compensatory tree planting to offset the net loss of key landscape resources. It is recommended that 340 trees be planted in this regard and a compensatory tree planting proposal outlining the locations of tree compensation will be submitted separately in seeking relevant government department's approval in accordance with DEVB TC No.7/2015.			

Other – Recommended Mitigation Measures

 Relevant environmental permits/licences should be posted at all vehicle entrances/exits. 	\checkmark	\checkmark

DETAILS OF COM	PLAINT					
Date:	12 July 202	23				
Time:	-					
Parameter:*	Dust	Noise	Water	Other (spe	cify) :	
 Description: Complaint of construction dust arising from ground breaking work in the construction site of the Sports Park. Please ensure the work fulfil the relevant environmental legislations and their subsidiary regulations. Please take necessary environmental measures to minimize the environmental nuisance arising from the construction site. 						
INVESTIGATION F						
ET, IEC and SOR no	otified on:	1	18 July 2023			
Investigation conduc	cted on:	1	18 July 2023			
Result of investigation	on:					
Complaint investigation was carried out with the contractor on 19 July 2023, the results of investigation were summarized as following:						
According to the contractor information, ground breaking was found in the area near N4 gate. Dust suppression measures had been properly implemented during ground breaking works. (Photo 1). Further enhancement had been carried out to prevent possible environmental nuisance included:						
1. Water truck had been working continuously around all haul road within the site (Photo 2)						
2. Water misting cannon had been installed to wet the area which water trucks cannot reach (Photo 3)						
ET and contractor carried out regular site inspections at Kai Tak Sports Park on 19 July 2023. (Photo 4) Construction dust mitigation measures recommended in EIA's Environmental Mitigation Implementation Schedule were generally implemented during the time of inspection.						
In conclusion, construction dust mitigation measures at the Kai Tak Sports Park have been implemented and maintained. All construction works carried out have been fulfilling the relevant environmental legislations and their subsidiary regulations during the concerned period.						

Complaint Investigation Report

Environmental Monitoring and Audit

RECOMMENDATIONS / MITIGATION MEASURES / ACTIONS

Environmental mitigation measures have been maintained as follow:

Sumy Chan

1. Dust suppression measures (i.e. Water spraying) had been implemented during ground breaking works (Photo 1).

2. Water truck had been working continuously around all haul road within the site (Photo 2).

3. Water misting cannon had been installed to wet the area which water trucks cannot reach (Photo 3).

4. Implementation of construction dust mitigation measures recommended in EIA's Environmental Mitigation Implementation Schedule.
